INTERNATIONAL ROAMING (IR) HELPFUL TIPS

01. Ensure that the country you are visiting is supported on Jio International roaming

Below are the IR pack options which covers various countries including top travel destinations:

- Global Packs: ₹1101 and ₹1102 packs; applicable in 160+ countries
- IR Voice & Data Packs: 3 validity options; applicable in up to 50+ countries
- Canada Packs: 2 validity options; valid only in Canada
- Caribbean Packs: 4 validity options; applicable in 24 Caribbean countries
- World Pack: 2 validity options; additional in-flight benefit with ₹2899 pack; valid in 88 countries
- Saudi Arabia Packs: 3 validity options; applicable only in Saudi Arabia
- East Asia Packs: 2 validity options; applicable only in Thailand, Singapore, Japan, Hong Kong, Macau, South Korea, Malaysia, Srilanka, Taiwan, Vietnam
- US, Mexico and U.S.V.I Packs: 3 validity options; applicable in 3 countries
- Gulf Packs: 3 validity options; applicable only in UAE, Qatar, Oman & Kuwait
- IR Data Only Packs: 3 validity options, applicable in 115 countries
- Wi-Fi Calling to India-only (Voice Packs): 2 validity options; applicable in 160+ countries

For more details on IR packs, please click here.

02. If you have purchased a Prepaid IR Recharge pack, the validity starts with the first instance of IR usage in International Roaming location i.e. a Voice call or SMS or Data usage.

03. If you have a Postpaid connection you can activate IR via Self-care and enhance your credit limit by clicking here

04. Ensure Call forwarding is disabled.

05. You can conserve on mobile data usage by following these tips:

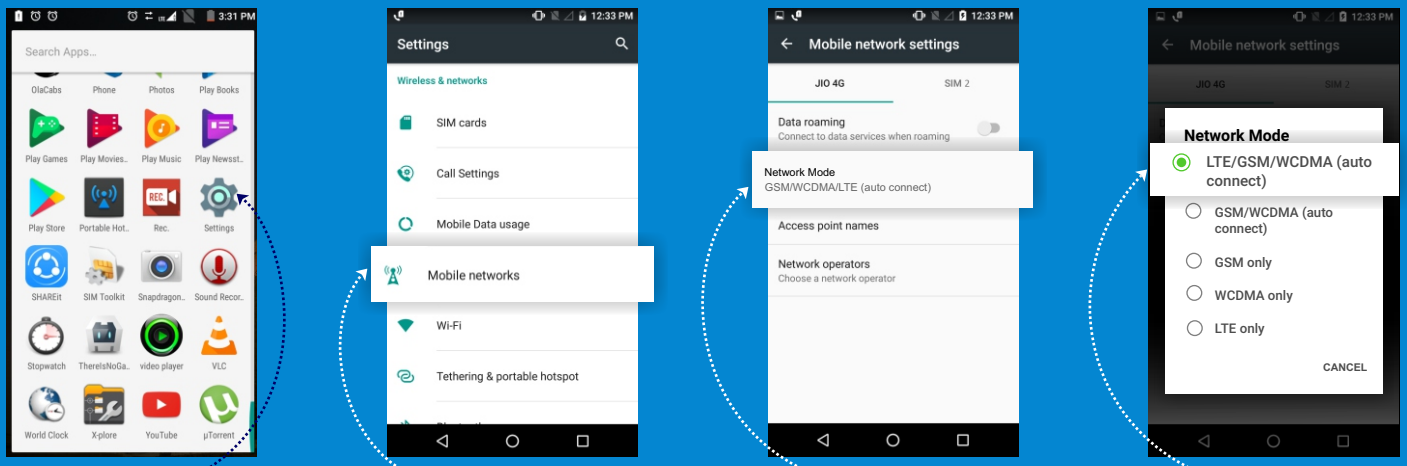
- Disable auto sync/download of Photos and files to Cloud applications such as Google Photos, Google Drive, Drop box, Whatsapp, Facebook etc.
- Use secure WiFi connection to access internet wherever available

06. Advisory: Please exercise extra caution while handling your mobile phone during international roaming. Any long press of certain numeric keys or power button can trigger unintentional emergency calls in some mobile phones. There may be strict penal provisions against customers in the visited country for initiating false or unintentional emergency calls.

TROUBLESHOOTING STEPS FOR ANDROID

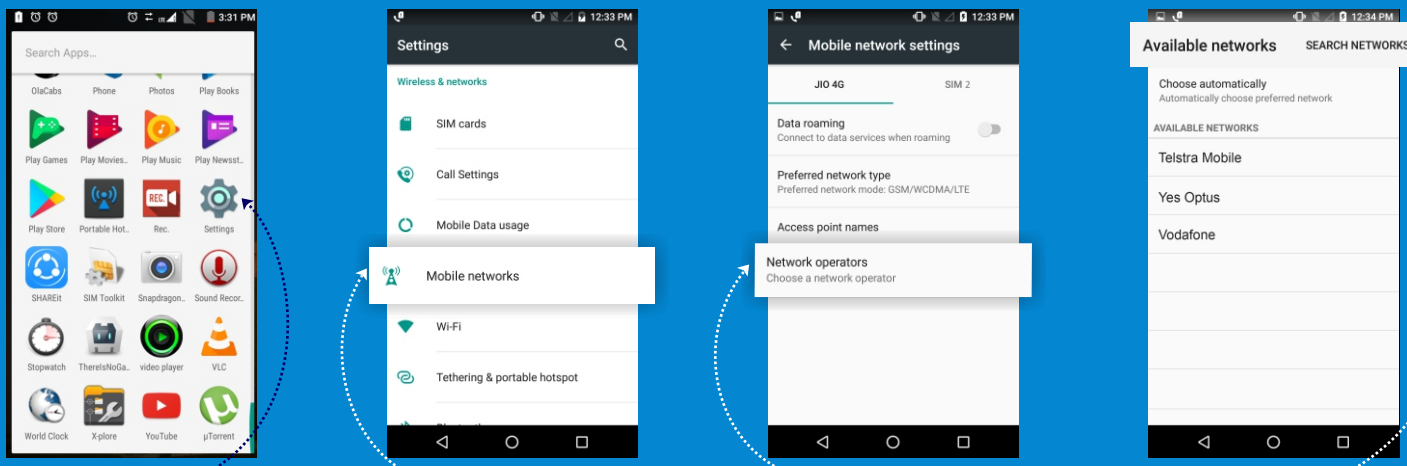
Steps to enable settings for International roaming network may vary for each handset model. Please find below the steps for Samsung:

01. If your preferred network type is set to **VoLTE / LTE** only please change the settings to **2G/3G/4G (Auto Connect)**



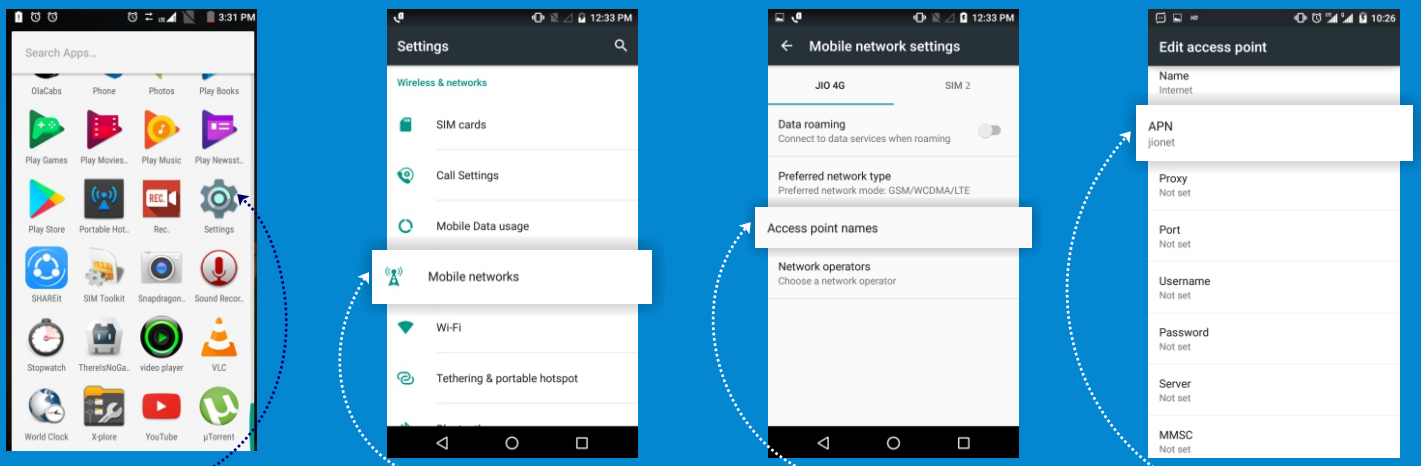
Click **Settings** → Click **Mobile Networks** → Click **Network Mode** → Click **LTE/GSM/WCDMA**

02. If your device does not register to the international roaming network automatically, then select **available network manually**.



Click **Settings** → Click **Mobile Networks** → Click **Network Operators** → Click **Search Networks**

03. If you are able to make/receive voice calls in international roaming but not able to use data then please follow the below steps

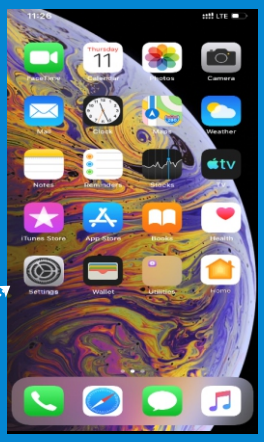


Click **Settings** → Click **Mobile Networks** → Click **Access Point Names** → Enter APN - **Jionet**

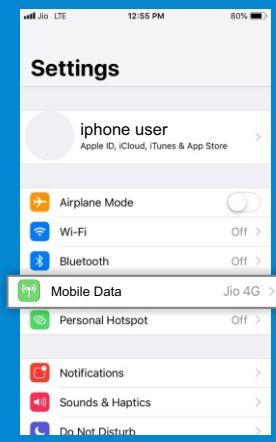
TROUBLESHOOTING STEPS FOR iPhone (eSIM)

01. Go to Settings –> Mobile Data –> Select Primary or Secondary SIM (Data Plan Label) -> Select Network Selection and select **"Automatic"** as **"ON"**

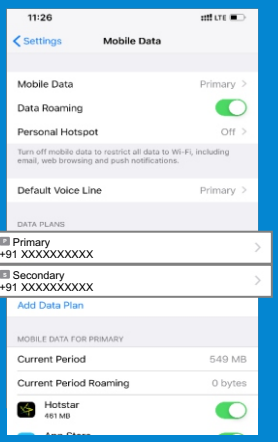
Go to Settings –> Mobile Data –> Mobile data –> Select Primary or Secondary SIM (Data Plan Label) and select Data Roaming as **"ON"**



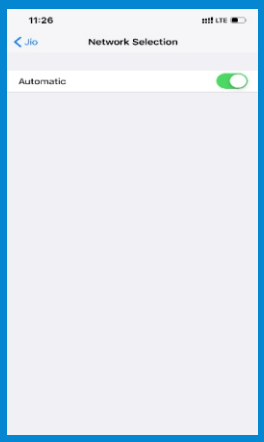
Click **Settings** →



Click **Mobile Data** →



Click **Primary or Secondary** →



Click Turn **on** & Select **available network**

02. In case SIM does not register to network automatically, select the network manually from the handset settings menu

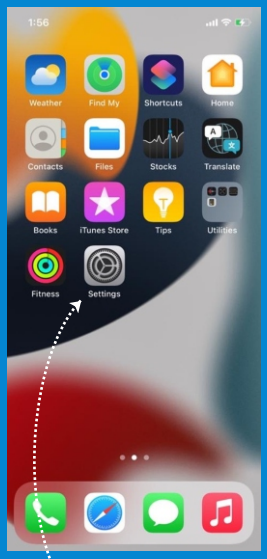
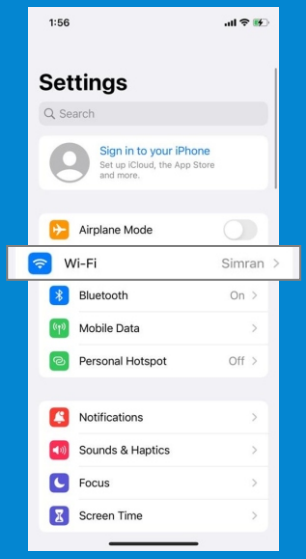
WI-FI CALLING STEPS FOR iPhone (PHYSICAL SIM)



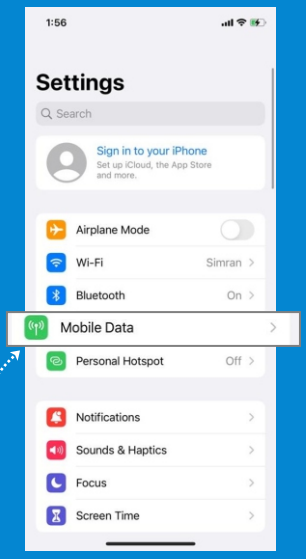
Tap on **Settings** in **home screen**

→

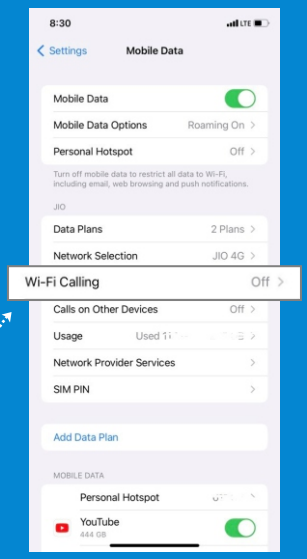


Scroll down and tap on **Wi-Fi** and connect to **Wi-Fi provider**

→

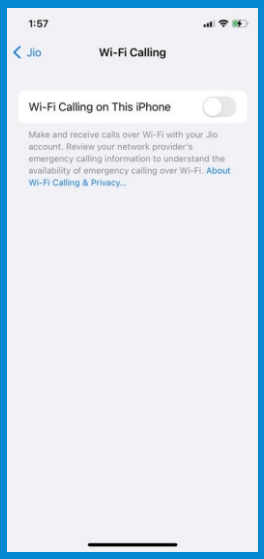


After connecting to Wi-Fi, now tap on **Mobile Data in Settings**



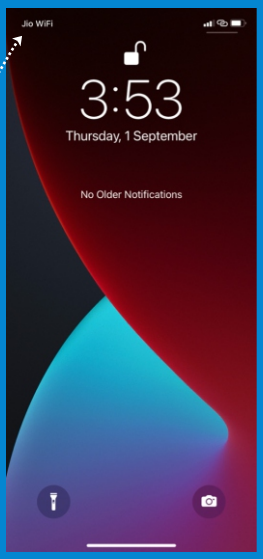
Now tap on **Wi-Fi calling** in Mobile Data

→



Tap on **Wi-Fi calling** toggle button to switch it **ON**

→



You will see **Jio Wi-Fi** on the top left corner once connected to **Wi-Fi calling.**

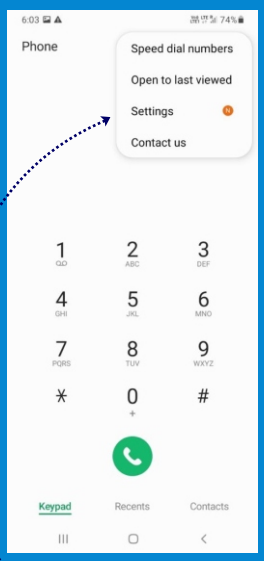
Key Things to Remember for Wi-Fi Calling Steps

- Wi-Fi calling service is dependent on the signal strength of the Wi-Fi service provider. If your device is not getting connected to Wi-Fi calling service, it could be because of some restriction by the Wi-Fi service provider.
- On Wi-Fi calling - Outgoing call only to India is allowed and Incoming calls fromanywhere can be received.
- Ensure Background data is disabled on device or Data Roaming is disabled if no data usage.
- To use mobility Service, Disable Wi-Fi Calling and then Wi-Fi in device settings. Please click here to know how to Disable Wi-Fi Calling.

If you are unable to receive calls, check if call forwarding is disabled.
Find below the Steps to Disable Call Forwarding:

STEPS TO DISABLE CALL FORWARDING FOR ANDROID

Steps for Android may vary for each handset model. Please find below the steps for Samsung:



Tap on **Phone** and Go to **Settings**
